Office Action Summary

1. The restriction requirement of November 29, 2001 contained an improper designation of the various species from which the applicant is required to elect. As a result, the restriction mailed on the above date is hereby withdrawn.
2. This application contains claims directed to the following patentably distinct species of the claimed invention: the nitrogen-containing organic compound, the oxygen-containing inorganic compound. The organic selections are presented in multiple format in claims 12, 13, 14 and 17. One should be selected if that is the ultimate species thereof that is desired. More selections are presented in claims 27 and 28. It is noted that some of these are within the preview of claims 12-14, while others are not. One ultimate selection should be made.

The oxygen-containing inorganic compound selections are set forth in claims 9, 15 and 16. Again, a single selection should be made.

The third component is presented as one of four selections in each of the independent claims. Claims 29-31 further modify this selection. Also the third and fourth selections of the independent claims contain multiple selections. One of the above possibilities should be selected.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim

Art Unit: 3641

is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
